

1.The Basic Structure of Slewing Bearing

Slewing bearing have many forms, but the structure composed almost the same. Figure 1 is the basic structure of slewing bearing.

Fig. 1

Single Row Four Point Contact ball Structure

Single Row Crossed Roller Structure

Double Row different Ball Structure

Three Row Roller Structure

Ball and Roller Combination Structure

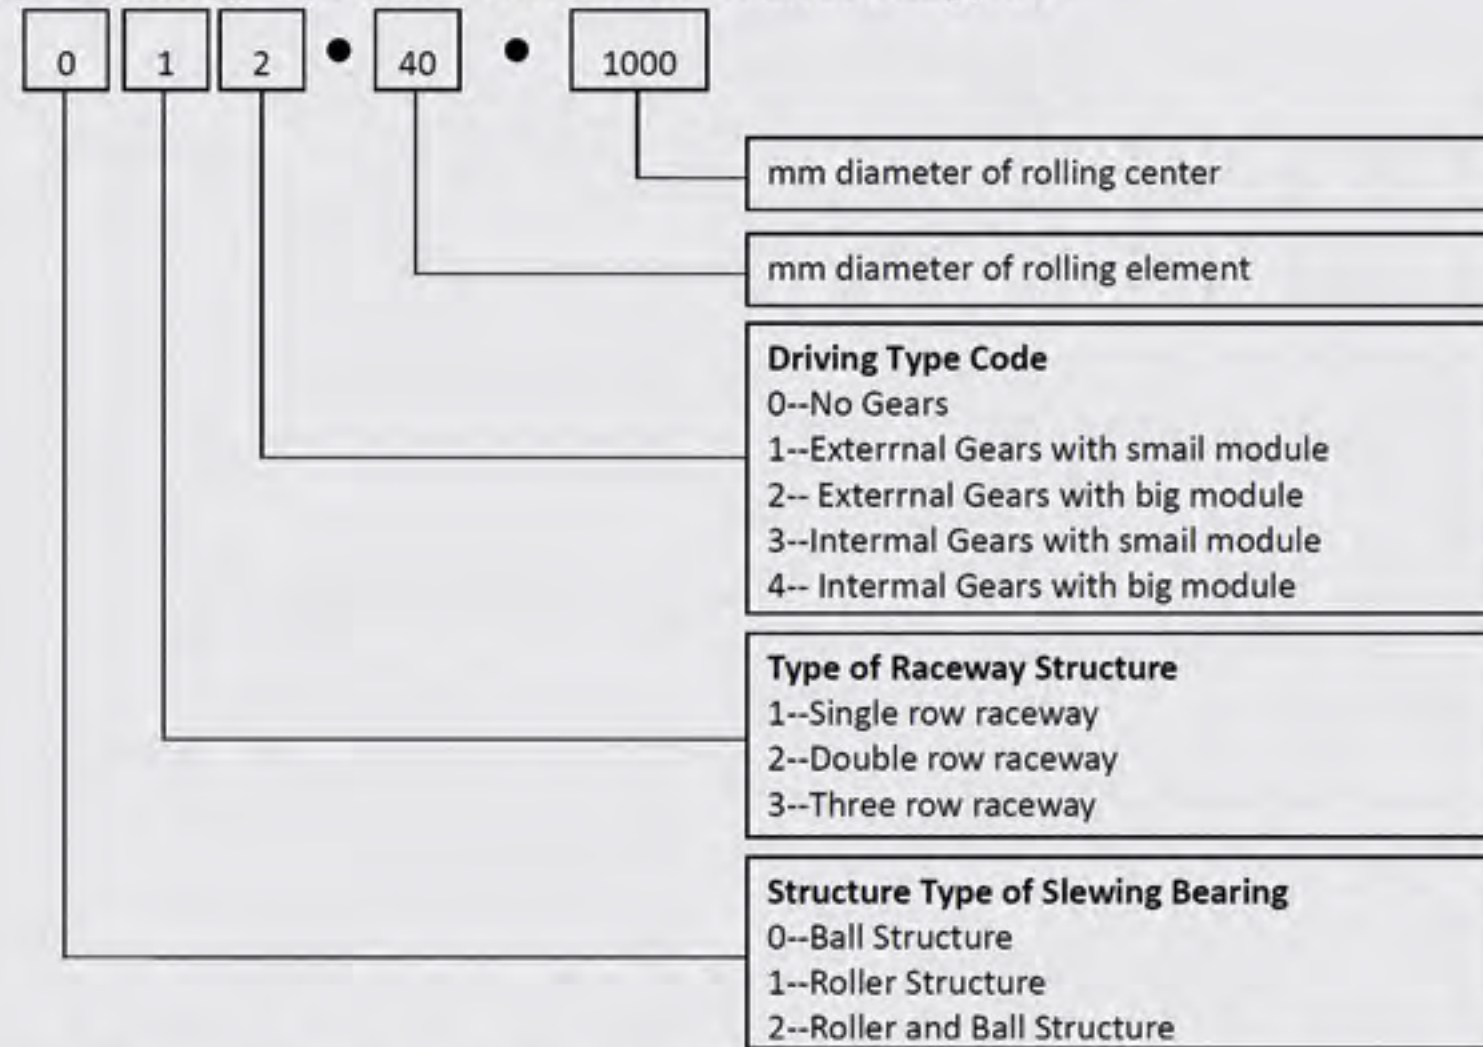

Double Row Ball Structure

2.The Naming of Slewing Bearing

2.1 The examples of specification for standard types

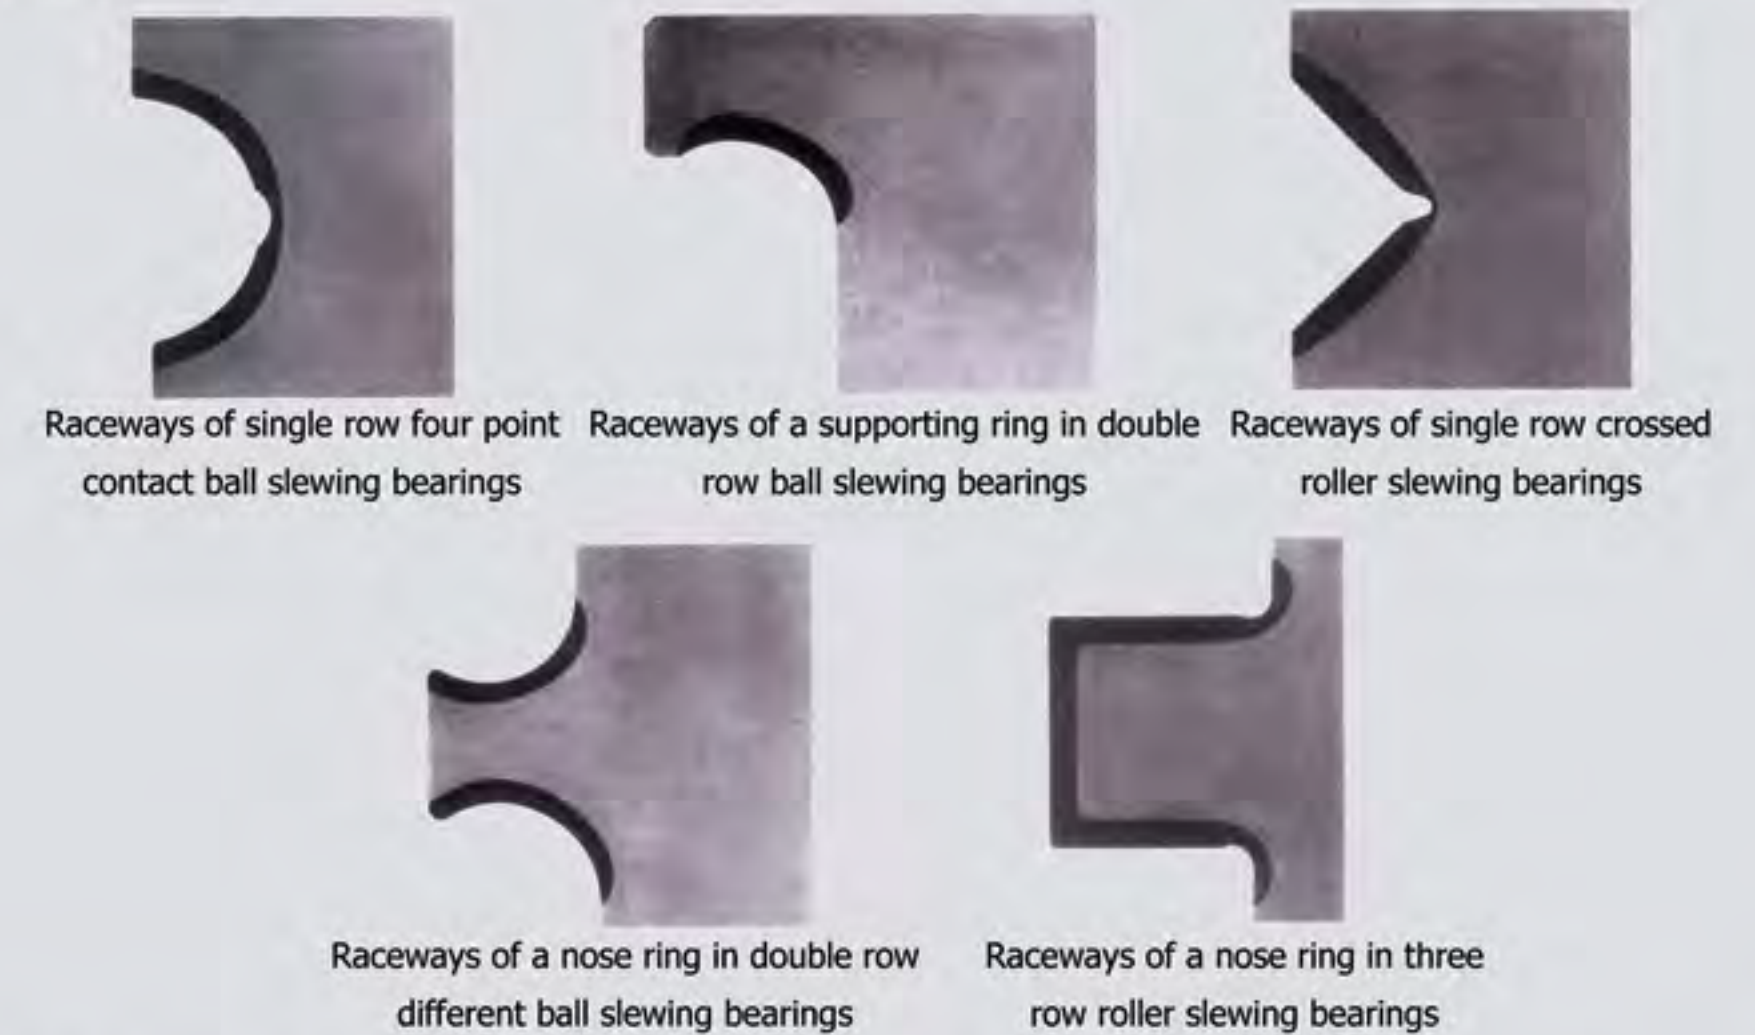

2.2 The Naming of Slewing Bearing -- Standard JB/T2300-1900

- (1) Structure type of slewing bearing
 - 0--ball series slewing bearing
 - 1--roller series slewing bearing
 - 2--roller and ball combination slewing bearing
- (2) Type of raceway structure
 - 1--Single row crossed roller series, single row four point contact series
 - 2--Double row different ball series
 - 3--Three row roller series
- (3) Driving type code
 - 0--Ungeared
 - 1--External Involute gears meshing small module
 - 2--External Involute gears meshing large module
 - 3--Internal Involute gears meshing small module
 - 4--External Involute gears meshing large module
- (4) Rolling element(steel ball or roller) diameter
- (5) Diameter of rolling center

3.Slewing Bearing Raceway and Gear Heat Treatment

Raceway heat treatment

Our company has advanced induction quenching lathe,all the slewing bearings' raceway are processed by surface induction quenching.The hardness will assure in the range of 55HRC ~ 62HRC,and can reach to enough depth for quenching.

Gear heat treatment

The statement of gear heat treatment normally have two statement, normalizing and tempering.The quenching of gear surface can processed according to customer's requirement,the hardness are in the range of 50HRC ~ 60HRC. In different application,the gear quenching can divide into whole tooth quenching and single tooth induction quenching,the latter one can divide into tooth surface & root quenching and tooth surface quenching.

4.Single Row Four point Contact Ball Slewing Bearing

Characteristic of structure, performance and application

The single row four point contact ball slewing bearing is composed of two seat rings, which design in compact structure and light weight, steel ball contact with the circular raceway at four point, it can bear the axial force, radial force and the tilting moment at the same time.

It can be used for slewing conveyer, welding manipulator, light & medium duty crane, excavator, and other construction machinery.

① Ung geared (010 Series)

010

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φcan change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

③ Internal Gear (013/014 Series)

013. 014

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φ can change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

Single Row Four Point Contact Ball Series Load Curve

Single Row Four Point Contact Ball Series Load Curve

Single Row Four Point Contact Ball Series Load Curve

5.Single Row Crossed Roller Slewing Bearing

Characteristic of structure, performance and application

The single row crossed roller slewing bearing is composed of two seat rings, which design in compact structure and light weight, the clearance is small when assembly, so need high precision. The roller are 1:1 cross arranged, it can bear the axial force, tilting moment and relatively large radial force. It is widely used for hoisting, transportation, construction machinery, and the military products.

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φcan change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

③ Internal Gear (113/114Series)

013.014

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φ can change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

5.Single Row Crossed Roller Slewing Bearing

5.Single Row Crossed Roller Slewing Bearing

6. Double Row Ball Slewing Bearing

Characteristic of structure, performance and application

Double row ball slewing bearing has three seat ring, the steel ball and the spacing block can be directly arrange into the upper and lower races, two rows of upper and lower steel balls with different diameter are fitted according to the stress condition.

This kind of open assembly is very convenient, for the upper and lower bear raceway arc angles is 90°, which can bear large axial forces and tilting moment. When the radial force is greater than 0.1 times the axial force need to be specially designed the raceway.

Double row different ball slewing bearing's axial and radial size are relatively large and solid in structure, so is specially suitable for the medium diameter tower cranes, truck mounted cranes etc. loading and unloading machinery.

Note:

1. n1 is the nos of lubricating holes. Oil cup M10×1JB/T7940.1~JB/T7940.2. The Oil nipple's location can be change according to the user's application.
2. n-φ can change to tapped hole, the diameter of tapped hole is M, depth is 2M.
3. The tangential tooth force in the form is the max tooth force, the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

③ Internal Gear (023/024 Series)

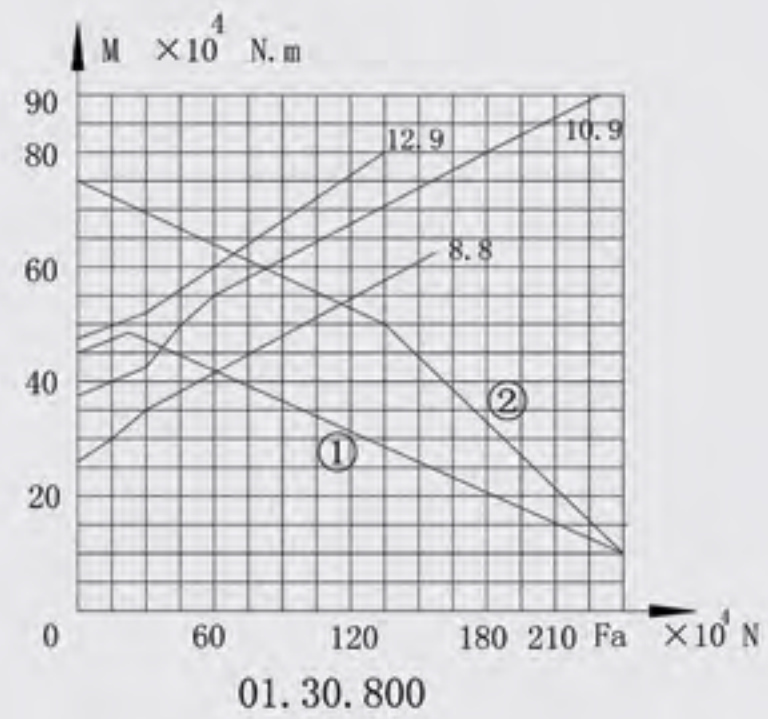

023.024

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φ can change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

Double Row different Ball Series Load Curve

Double Row different Ball Series Load Curve

7.Three Row Roller Slewing Bearing

Characteristic of structure, performance and application

The three row roller slewing bearing has three seat rings, which separate the upper, lower and radial raceways, it made each row of the roller's load capacity can be specified and can bear different loads simultaneously. The capacity load is the largest one compare with the other three models. Due to the large size in axial and radial dimension & the solid structure, it is specially suitable for the heavy duty machinery such as wheeled excavator, wheeled crane, ship crane, ladle turrets and the heavy duty mobile crane etc.

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φcan change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "K" is addendum reduction coefficient.

③ Internal Gear (133/134 Series)

133. 134

Note:

1. n1 is the nos of lubricating holes.Oil cup M10×1JB/T7940.1~JB/T7940.2.The Oil nipple's location can be change according to the user's application.
2. n-φ can change to tapped hole,the diameter of tapped hole is M,depth is 2M.
3. The tangential tooth force in the form is the max tooth force,the nominal tangential tooth force is 1/2 of the max one.
4. "k" is addendum reduction coefficient.

Three Row Roller Series Load Curve

Three Row Roller Series Load Curve

8.Thin Section Slewing Bearing (Light Type)

Characteristic of structure, performance and application

The Thin Section Slewing Bearing has the same structure with the ordinary slewing bearing, but the weight is light, and rotate flexibly, which widely used in the food machinery, canning machinery and environmental machinery etc.

Note:

1. n1 is the nos of lubricating holes. Oil cup M8×1JB/T7940.1~JB/T7940.2. The Oil nipple's location can be change according to the user's application.
4. "Km" is addendum reduction.
